

JS1: Browser JS Basics

Skills

- script tag
- alert, prompt
- string functions and properties

Requirements

a. Hello Boulder

1. Create a blank, valid html5 document.
2. Create a javascript file with the content `alert('Hello Boulder!');` and include it in your page with the script tag.
3. **Check Yo Self:** When you refresh the page, you should see an annoying alert box that interrupts with the message, "Hello Boulder!".

b. Personal Hello

1. Create a blank, valid html5 document.
2. Create a javascript file and include it with a script tag as before.
3. Use var, prompt, string literals, the + operator, and alert such that when the user opens the page, it will ask them for their name, and then respond with "Hello [YOUR_NAME]!"
